

Dear Parents and Patients,

Our office is excited to announce the addition of a revolutionary advanced process that allows us to straighten teeth with braces in significantly less time. The process is called **SureSmile** and we have found it **shortens** treatment time by 30-40%. This results in fewer office visits and less overall discomfort. We are among an elite group of orthodontists providing this advanced treatment for our patients. In fact, we are the **first** orthodontic office in Pennsylvania to offer this new technology.

SureSmile combines 3D imaging with sophisticated diagnostic software allowing customized prescription of your orthodontic treatment. The braces are placed in the same manner as we always do. Approximately 4-6 months into treatment, the teeth and braces are scanned into the computer creating a 3D image for Dr. Weiss to **virtually** complete the treatment. That information goes to a robotic arm that bends a wire in 3 planes of space which is beyond human abilities. The wire is tied into the braces and works more efficiently resulting in shorter treatment time.

This new technology will be available at an additional cost to our usual fees due to our increased cost for the new technology. Currently there are over 100 orthodontists in the country using this technology with over 10,000 patients in treatment and growing. More information about this company can be found on their website at [www.suresmile.com](http://www.suresmile.com).

If you are interested in becoming a SureSmile patient, we will be happy to discuss this further at the new patient appointment. We will always work hard at keeping this office on the cutting edge of technology for the benefit of our patients.

Sincerely,

Adam J. Weiss, D.M.D. and Staff
